Speed Bumps Helps You to Avoid Accidents by Mike Nicholson

Article published on May 21st 2012 | Management

As the population is increasing so does the number of vehicle too is on the high rise. Its almost next to impossible for one to think of traveling with our foot, isn't it? Today there is not only limited space for a pedestrian to walk in the side lane by the road side but the space is being encroached too by the pillion riders in the streets. On daily basis, people are being harassed with the increasing traffic. The rapid increase in the traffic has given rise to the road accidents. Thus, to avoid these accidents Traffic Safety India has brought varieties of road safety products for you such as Speed Bumps, Impact Barrier, Flexible Bollard and many other road safety products are in its collection. You can make use of it according to your needs.

Do you know what actually speed bumps are and where they are used? Speed Bumps are road safety measures that helps to reduce the speed of the vehicle while at turning or at the parking its used so that you may not fall in the trap of death. Traffic Speed Bumps are also known as speed breakers, speed humps and road humps which helps to control the speed of vehicles and is also useful to stop people who try to overtake other vehicles and drive their vehicles on high speed. Large number of people have this kind of tendency and follow the same habit of overtaking other vehicle. Thus, what happens is they drive their vehicles in such a way that they forgot the rules of traffic and do whatever they like. Because of these kinds of people accident occurs.These people don't want to follow the traffic rules or they don't know about the traffic rules.

These flexible bollards, impact barriers can be strategically placed on the street to create convenient walkways for pedestrians to cross the street. Speed bumps can be ordered in various heights and widths and the combination of both of these specifications will determine whether speed is controlled slowly and gradually. This makes them especially handy in areas where pedestrian traffic is at an especially high rate. With speed being a major problem on today's streets, speed bumps have become commonplace, especially where people are living, walking, and children are playing. Speed bumps can also come in various shapes, sizes, and materials.

If there are no speed bumps on road or traffic rule then because of these people many more accidents will take place . These Speed Bumps are made of concrete, asphalt, rubber and Plastic. Removable speed bumps are perfect for situations where there are temporary needs for reducing the speed of vehicles. These removable speed bumps are mostly used in public places. Drive safely.
