Article published on May 7th 2012 | Mobile Phones

If you donâ€™t want to count massive telephone bills as part of the overall expenditure for an international tour, then use an international mobile phone while travelling. Although, phone companies in U.K and U.S offer a myriad of international plans for travelers, yet calls made under such plans come tagged with high roaming charges. To help you out, there are several options for international mobile phones available in the market today. The plans vary widely in terms of costs. Hence, our suggestion is- wait till your reach the foreign locale before arriving at any decision about the international mobile phone. As discussed already, the market for international mobile phone is packed with a large number of options. In order to make most out of your deal here are a few suggestions worth considering.

Start by packing notes, charger and phone in the luggage you are carrying. Be sure to choose a plug adapter.

The first thing to do after you reach the destination is look for a local mobile shop. Ask the shop authorities for a detailed list of pre-paid phone plans by local service providers. Next, compare the rates each one of those companies is offering with what your cell phone company charges you. You can either choose to go for a mobile phone rental or buy a new device, depending on the necessities. However, it should be remembered that renting will cost you much cheaper compared to a new phone altogether.

If you still decide in favor of buying a new device, then it is advisable to purchase a cheap international mobile phone with pre-paid calling facilities. A pre-paid phone gives you the opportunity to use SIM cards of many companies. If you are planning to visit multiple nations before returning, then the prepaid plan will suit you best.

If the deal your current cell phone provider is offering sounds better than rates in the new location, then call the former up and avail their international travelers plan.
