# No Android Apps for BlackBerry Smartphones by Andy Thomson

Article published on April 11th 2012 | Mobile Phones

After inventing a numerous BlackBerry handsets, Research In Motion is set to release yet another weapon of its firm and the set is heard likely to be 7-inch by dimension and monikers as PlayBook. This slate ship equips latest OS (operating system) associated with QNX core along with custom facets. The motto behind the release of such new device by RIM is to make messaging and other efficiency applications easily accessed by the users.

Research In Motion (RIM) Vice President, Alec Saunders, on Friday, declared his dropdown plan of introducing sidewise Android Applications set-up in its upcoming BlackBerry PlayBook and Smartphones, via social network, Twitter. On snooping the VC said that Androids apps are already so much available in markets with dreadfully high echelon and the company is trying to avoid duplicity of already-existing software.

This could be taken as a bang on the head of Google Play stores (Androids Apps stores) which had confronted malware related problems previously. Android apps are more-in-demand by Smartphone users more than phones bearing iOS software. Lacking of apps might result in fall in sales to consumers and consequently, fall in developerâ€™s earnings. Additionally, Alec Saunders also stated other reason for not including Androids apps as sidewise function as to evade piracy in the orb of BlackBerry PlayBooks. He also cited few instances where many Smartphone manufacturers utilized copied designs of Android apps and offered the same for free to the users. But such acts may lead users to face difficulties while using Android based PlayBooks and Smartphones.

It seems like RIM believes in being a pond rather than being a septic tank. This is because, on one hand, Saunders confirmed that company will include sidewise-utilizing software to cover-up the place of Androids apps but on the other side, he also affirmed that the company in the midst of process will be facing loss of around three hundred thousand active Google Play Storeâ€™s applications.

More information on bringing in the apps for CrackBerry is still to come out yet and RIM VC has assured to reveal such info today, by the end of the date. Nevertheless, BlackBerry PlayBook interface is still attractive as well as quite appealing.
