Portable Two Way Radio â€“ Make them long lasting by James

Article published on February 29th 2012 | Mobile Phones

The portable two way radio is extremely similar to cell phones in numerous ways, with one big difference. Cell phone transmits to a tower and portable two way radio transmits directly to one another. People who use cell phones and two way radios both say both their batteries by no means last as long as they would like.

Newer Better Batteries

This pertains not only to the charge time, however, as well to the general lifespan of the batteries themselves. The good news is that developmental researchers have made huge strides in battery technology in current years and that technology is at present accessible to two way radio or motorola portable radios users.

Twice the Charge Capacity

They are known as lithium ion batteries and they hold about twice the charge of nickel cadmium batteries by size. In addition, those have a considerably longer lifespan as well. There is one catch though, and that is that they do cost a little more and they are relatively a bit more sensitive to the elements.

Take Good Care Of Them

They do not like unexpected impacts, thus dropping them can have a destructive impact on not only their storage capacity, however, their lifespan as well. In addition, they are required to be kept fairly cool, as compared to nickel cadmium batteries. In reality, leaving them in the sun in a car or truck only a few times can have an obvious impact on how well they work.

Two Years At The Most

Even under best possible conditions, lithium ion batteries can be anticipated to last no longer than about two years. Though; under normal working circumstances that will most probable last about a year or so. The most excellent place to keep lithium ion batteries when they are not in use is in a refrigerator.
