Reasons That Makes RBC7 Batteries So Special by [James Blee](#)

Article published on December 22nd 2011 | [Mobile Phones](#)

The RBC7 electrical batteries are a special type of battery power that is specifically meant to be used with the APC UPS units. Every now and then, we find users throwing away their UPS systems frequently primarily due to the failure of their dead batteries. This in fact is the commonest of problems which is natural as well as they have a specific life time following which it starts exhausting and eventually ends up giving up its power storing features.

However, with newer designs coming up on a regular basis, users are nowadays recommended not to throw away the entire unit itself as most of the modern batteries in the likes of rbc7, csb, cp1290 and others comes with rechargeable power cartridge that can be recharged and used over again and again. This is one of the biggest advantages of rbc7..

Being capable of holding a fair quantity of alkaline high power, the rbc7 battery helps the UPS systems to function smoothly and deliver the required amount of energy during power failures or collisions.

It is really simple to set them up and after setting, the much needed installation can be completed in as less as a few minutes only. To begin with, remove the steel plate on its back by unscrewing the couple of anchoring screws that keeps the plate affixed to the body. Next, detach the power cables followed by replacing the faulty battery with a new or a freshly recharged one. After you are done, reconnect the power cables, reinstall the steel plate and fix it with the same pair of screws that you have unscrewed earlier. Lastly, fix the plastic that serves as front panel of the UPS system to finish the process.
