Samsung Galaxy 551 I5510 by Jameskenrich

Article published on January 19th 2012 | Mobile Phones

Samsung has been launching one after another Android powered smart phones in the Galaxy series. After successful entry of other Galaxy series smart phones, Samsung has come again with yet another stunning smart phone that has been labeled Samsung Galaxy 551 I5510. Although it is presumed that this model stands nowhere as compared to the Samsung Galaxy S model yet it is well known for its stylish sleek design. It is mounted on a plastic chassis that proudly features the Touchwiz 3.0 user interface.

This mobile set is powered by the strong 667 MHz processor and runs on Android Froyo operating system version 2.2. It features a side sliding QWERTY keyboard that has the normal Android buttons. One can utilize the menu key as a search button if you hold this key for a little longer time. One of the noteworthy additions is the .com option on the right side key just next to the spacebar. Other few important features of this smart phone are the good connectivity support. It has various connectivity options such as data connectivity through GPRS-Class 10, 32-48 Kbps, EDGE-class 10- 236.8 kbps, WLAN, Wi-Fi 802.11b/g/n DLNA, 7.2 Mbps HSDPA, 3.0 Bluetooth with A2DP support. All these latest connectivity features helps in easy transfer of data at lightning speed.

Samsung Galaxy 551 I5510 is also equally good for music lovers. For music addicted people the Android smart phone has the latest DivX playback support feature that enables play back of various file formats such as MP4/WMV/H.263 player. All these features help in watching videos and pictures with clarity and superb sound. One can listen to their favorite audio tracks through MP3/WAV/eAAC+ players. It is also prepared with FM player along with a 3.5mm audio jack. The capacity of the internal memory is 160MB which can be further expanded up to 32GB using microSD card. Still with the Android 2.2 Froyo aiding the transfer of applications to the microSD card, the 160 MB is very less for storage of applications. Each application on the SD card will need this feature to be enabled or else the application will not run when the phone is connected via the USB port.

This set is outfitted with a standard Li-Ion 1200 mAh battery providing reasonably good performance of standby talk time value. This is in a lesser capacity as compared to the 1500 mAh found on some of the Samsung Galaxy models such as the Galaxy S and the Galaxy 3. Taking into consideration that the same capacity battery working on other OSâ€™s does run for a long, it can be made sure that the battery on this model may not have long life. For games lovers the instrument is outfitted with lots of games. In Indian market this smart phone would cost you around Rs 9,600 only.
