Article published on December 6th 2011 | Mobile Phones

Samsung Galaxy Note is one of the new arrivals to the popular Samsung Galaxy range of smartphones. The perfect smartphone for people, who need the phone with wide screen. It comes with Android OS, version 2.3 (Gingerbread)

Samsung released the Galaxy Note after the deep end user understanding and insight. Customer can feel the difference of Galaxy Note among the others and can enjoy all the quality features available on it. And further more Samsung galaxy note is available on charming black and white colors. This gadget is manufactured with 3G Network.

You can browse, you can chat, you can send mails, you can make video calls and you can update your status on face book, you can tweet on twitter in wide screen of galaxy note with high speed. Everything is possible with galaxy. No need to search outside. Samsung galaxy note brings world on your hand.

The wide screen of Galaxy note is 5.3 inches (~ 285 ppi pixel densities) which is the largest screen size with smartphone portability. And the Super AMOLED capacitive touch screen that supports about 16 million colors that ensure that PowerPoint presentations, web-pages, news apps and e-books can be viewed comfortably with minimal scrolling or zooming. Split-screen operation for frequently used native apps can be performed well in the HD super AMOLED screen.

The 180 degree viewing angle, gives you better viewing experience.

What is S Pen?

The advanced pen input functionality is combined with the full touch screen and that is named as S pen. Though it has some improved functions compared to similar systems, S pen does not require a battery. It can be used for accurate sketching and artwork. The increased accuracy and control of S pen is used to draw hand written drawings, personalizing captured videos or photographs easily.

By one-step screen-capture function, you can capture any screen instantly and can also be annotated before being filed. And you can send your handwritten drawing to your friends through Samsungâ€™s ChatON communication service.

S-Memo Multimedia application â€“ All the multimedia tasks like Pictures, voice recordings, typed text, handwritten notes or drawings can be captured via a single application and converted to a â€˜memoâ€™, t be edited, annotated and shared as desired.

The 1.4GHz dual-core processor gives you to feel incredibly fast and a smooth user interface in all application. The HSPAï¼‹ and LTE-enabled device is used for super-fast connection on browsing. The SSL VPN enables large enterprise and service providers to meet high-volume secure access and authorization requirements.
