Unlike old times, we have DVD, Blue-ray and many more for video entertainment. Standard definition is not even standard too. You get high definition and 3D videos almost everywhere. You can even shoot your own HD movie with handy digicams. Shooting 3D is not only fun today; it's affordable too.

To fit into this fast changing world of video entertainment you need proper video player. So, let's see what you must know before buying the latest video player from the store.

1. Why do you want a video player?

Video players are capable of doing lot of stuffs today. Unlike old time CD, VHS or DVD players, they can fiddle with lots and store a lot. So, before buying one you need to know the purpose. In case you have stacks of VHS cassettes, VCDs and DVDs; and you just need a way to enjoy them, a simple player would do.

However, if you want to enjoy streaming videos, update yourself with news snippets and regularly keep an eye on favorite TV soaps, a complete video player will be useful.

2. Which definition to follow?

As we said earlier, standard definition videos are going down steadily in popularity. Almost every new video is coming in HD. So, there is no point in restricting future possibilities with only standard def players. Besides, in HD also you get lot of aspect ratio depending on quality of HD. Wider aspect ratios are always visual treats. So, you must consider the best video players available in the market, capable of delivering rich high definition videos.

3. DVD, Blue-ray, flash memory or streaming

We have today an entire range of media for storing our videos, images and audio files. You get inexpensive DVDs, flash drives, Blue-ray, hard drives, streaming video and cloud storages. Flexibility in terms of storage allows you to juggle with lots of options. Streaming video and cloud storage are fast becoming affordable and reliable. You can overlook them at your own cost. Days are coming when they'll be indispensable along with satellite TVs. So, keep open as many options as possible.

4. Brand and reliability

Good brands are always reliable in terms of quality and reliability. You also get lot of third-party attachable add-ons. With exotic obscure brands that won't be easy. Besides, electronics could be pretty fickle if you are living in harsh weather. You'll need after-sales, which only a reputed brand can assure.

So, think wise and choose better. Wish you a better entertainment at home.
