Visual plays the most important role in entertain in our daily life. These media files are downloading from sites like you tube, which is mostly used to download the video files. These videos contain songs, movies, funny clips and many other entertain videos. Many of these files, which download from the "You Tube" site, are in many formats like AVI, WMV, FLV and many other formats. It can play easily on Microsoft Media player. There is no requirement for the third party media player.

These third party media players are harmful for your computer, because they are not registered to computer. It may be the cause of your computer disaster. For that; your computer may lose your important data. Media files, which are downloading from the different sites, are only compatible for Microsoft operating systems. It is not compatible to Apple Mac operating system, because of incompatible format of your media file. These media files are mostly in AVI and FLV format. There is fluctuation in Mac player, when you are playing on it, because of incompatible format.

FLV is the short name of "Flash videos". Most of the videos, which are downloading from the streaming web sites, are in AVI and FLV format. These files are not protected from Digital Management Rights. It plays easily on all Mac operating systems. These files are easily played on your iPod, iPhone, and Black Berry. You can easily share these downloading files to your fast friends and loveable family members. It can't play on Apple Mac, because of incompatible issues. If you want to play this file on Mac, you need to burn or rip these files on DVD's with DVD Ripper Mac or DVD Creator for Mac.

DVD is the shot name of "Digital Versatile Disk". It contains a large amount of data, rather than the other storage drive like Compact Disks. It is mostly used to make the backup of your important data, because it is compatible for all the operating systems and easily available in the market at low price. You can make the collection of favorite songs on your computer and burn these files to share them or watch them at hom e on large LCD's. These burn files can easily play on Apple Mac, because these VOB files are compatible to Quick Time player.

Recorded videos like your Christmas and Wedding ceremonies of your beloved one are in AVI format. These files on play on Microsoft and cell phones like I Phone, Galaxy, iPod, and Black Berry, You can share this file to your friends via Bluetooth devices. These files can't play on Apple Mac operating systems, because of incompatible format. If you want to play, that files on Quick Time player.
