The Piano Gallery: Step One in the Early Nurturing of Piano Virtuosos by [Rosa Davis](#)

Article published on February 9th 2012 | [Music](#)

For centuries, pianos have introduced some of the world's finest virtuosos. When your seven-year-old child prodigy gets on the piano and starts playing Nocturne Op. 9 No. 2 by Chopin, you can tell that his musical future will be bright. The piano is more than just an instrument to make music to everyone's ears, as it is also the medium with which talented prodigies become musical superstars.

An example of a very young classical pianist that made his debut into the world of music is William Crotch. At three and a half years old, Crotch already played the piano for both the St. James' Palace Chapel Royal and before the presence of King George III, the ruler at the time. His debut at a young age allowed him to gain experience and learn not only about piano but about music in general.

If playing the piano can be compared to painting, the piano itself is the canvas and the music it creates is the masterpiece. The skill at which the pianist gracefully transitions from key to key is the paint from which various musical pieces are formed. The speed of playing a piece with the piano adds a unique flair to the music—a familiar trait of contemporary piano music. A pianist can think of many ways to use the piano to create wonderful sounds.

Playing the piano at an early age helps the child develop his sense of creativity and nurture his attention to detail. A great number of today's piano prodigies began playing the piano as early as one to two years old, and made their debut at around three to five. If you need a piano for your family to play some classical pieces for leisure or for learning, a piano gallery is the best place to look for one.

The piano can also teach children the value of hard work and perseverance in the toughest of times. Mastering piano pieces takes years of habitual practice, while improving on technique is a lifetime journey. Classical pianists such as Chopin and Mozart rose to fame and fortune because of their sense of perseverance. What better place to start one's career in music than in a piano store?

Overall, the role of the piano beyond being an instrument that creates music is clear. The piano gallery is home to different kinds of pianos, keyboards and synthesizers you can choose from to get started with this activity for your family. Whichever musical piece your child chooses, the road in producing a piano prodigy starts with the press of one key.
