Fix Network and Internet Connection Problems with HP System by Jack K Wilson

Article published on April 11th 2012 | Networks

HP laptops and computers are ubiquitous. People from all walks of life are relying on the HP technology to accomplish vivid tasks related to home and businesses. When it comes to computing, the sense of surfing and browsing dashes into the mind instantly. The addiction of the Internet in the present generation is to such an extent that unless the HP PC or laptop is connected with the Internet, people donâ€™t perceive computer setup to be completed.

Read this HP Support article, to walk through solutions to fix network & internet connection problems in Windows 7. This will strictly deal with the wireless connection when you are totally barred from the Internet connection. First and foremost step is to analyze the prevailing issue and come with a clear mind as what is the root cause. Identify the connection problem, and proceed ahead as per the below situation.

Your browser may display error messages as: â€œInternet Explorer cannot display the Web pageâ€•, â€œOffline: No connection to the Internet is currently availableâ€•, â€œNot connected: You are currently not connected to any networks.â€•

Check whether your computer is able to connect with the network. If yes, then make sure that it is connected to the correct network. Check it through the Network Connection icon available in the Control Panel. If the computer is connected to an incorrect network, click the name of the network, and then click Disconnect. Click the name of the correct network, and then click Connect. Now, check whether you are able to access the Internet. Next, try using browser without add-ons. Depending upon the browser you may have to follow different steps. For Internet Explorer: Click â€œStartâ€• type â€œadd in the Search programs and filesâ€• area, and then click â€œInternet Explorer (After the settings, Internet Explorer displays a page that states, â€œInternet Explorer is currently running without add-ons.â€• Next, you can try to reset Internet settings. Close any open Internet Explorer windows and follow as: Click Start>Control Panel>Network and Internet>Internet Options>Internet Properties. And under the â€œAdvancedâ€• tab, click the â€œResetâ€• button.
