Article published on February 12th 2012 | Networks

In todayâ€™s modern and technical advanced world everything is depends on the internet. Internet made the distances less between the peoples around the globe. Now we cannot survive without the internet connectivity. Internet connectivity is very much important in everyoneâ€™s life. To access the internet we create the home network through which can access the Wi-Fi and other wireless network. Sometimes the home network becomes very slow and gives different problems regarding the speed. But with the help of some tips we can speed up our home network.

But these techniques and tips canâ€™t speed up your home network more than the internet connection you have. If the one is still not satisfy with the speed of the home network, he / she should check the hardware and internet connectivity.

Here are some helpful tips through which you can speed up the home network:

â€¢ Adjust the position of the router:

The one should try to adjust the router in that way through which router covers the larger area of the house or the office where the router is installed. Try to place it high as possible in the room and if the one have many walls than use the extended antenna.

â€¢ Try to avoid the interference in your home network

Cordless phones, cellular phones and any neighboring network can cause the interference which can speed down the home network. If you are using an old cordless phone, then try to replace it with the new land line.

â€¢ Purchase the signal extender:

To extend the range of home network is the serious and the biggest issue. If you are using in the large area then the one canâ€™t adjust and change the position of the router again and again. To purchase the extender is the best solution those are using the network in the large areas.

â€¢ Try plug-in extender:

To use the plug-in extender is not the best way. But sometimes it really works and can extend the signals of your home network. But this technique is not applicable in the old cable wiring because they are not enough clean or creates interference.

â€¢ Change the router or hardware of network:

At last if the one tried all the above method to speed up the home network and got tired because of not properly working. Then without thinking much changes your router with new one. This step can change your world of internet surfing and the live streaming.
