Article published on February 14th 2012 | Networks

What will you do when you want to share the data between you and your friend or at the office? You will use pen drives and other external sources for that or you will do something else. One of the very simple idea and very famous procedure now a day is through the Home group. You can share your all data and other files through it. In this you need not to go to the each system personally and can access the data from the far place also. You can also share it between many people at the same time.

There are voluminous reimbursements of using this network process because in this you can share the data between many users at the same time which is its extra advantage. But at some instants the process may not work due to some type of errors. These errors may occur due to many different types of reasons for that. The errors can be fixed by firstly understanding the reasons and then fixing it.

To remove all the errors you have to know that how the Home groups are created and how to connect through them with each other. One of the very simple reasons for problem in not ablre to access the data is that you may not be in the same Homegroup. Firstly you have to find out that are you in the same Home group or not. You have to come in the same Home group. When you come in same Home group then you must procure the password of it to access the group. When you join the same group then your system becomes the part of it. To access the Home group you have to go to the Control Panel there you have to type â€˜Home groupâ€™ in the search box which is available there. Here you will discoverthe option of â€˜Join Nowâ€™, there just click on it. If there is no Join now button the it can be understood that no group is active and it ensures that no Home group is existed there.

The network discovery should be visible and through it you can decide that which users can access it and get the data. For such work Windows Firewall are designed and you can enable that without any type of problem. So for sharing through the Home group you have to turn Network Discovery on so that other users can access the data.
