Article published on December 8th 2011 | Outdoors

Automatic knives are those in which the blade slides parallel to the handle to deploy. There are two forms of out-the-front knives. The first is the single action OTF knife which automatically extends the blade, typically with a push button, but which needs to be manually retracted. The second type of OTF knife is the double action knife which immediately extends the blade and retracts it with a sliding button or release. Microtech OTF knives are good tactical knives because they are fully automatic.

OTF knives are the ones which, when triggered, push the blade out of the front of the handle. They may be split into subgroups such as manual slides knives, automatic OTF switchblade knives in addition to gravity knives that are restricted as they possibly can be considered and utilized as offensive weapons.

Even so, because they are fully automatic, they make superb tools for law enforcement and military. Particularly in circumstances where they can't safely progress without their firearm in a single hand, the automatic OTF knife offers them the flexibility and ease of use while offering protection.

As these automatic OTF knives can be employed as an offensive weapon, a lot of nations all over the world have prohibited the ownership or use of knives that are automatic or OTF knives. Additionally, a lot of schools and universities also have prohibited the possession or carrying of such a knife.

There are some exclusions to this. For instance, a sportsman or an individual whose job necessitates the use of this type of knife would be permitted to posses a Microsoft OTF knife - such as a chef. The use or possession of knives such as these by ordinary people has been banned in the most part because of their offensive nature and even certain OTF knives being associated with possible gang affiliation.

Austria is among the few exceptions to the banning of OTF knives by civilian use or possession. In Austria, ordinary people are allowed to own automatic knives. This is very different than attitudes of the majority of other Western European nations where knives are regarded with mistrust because of their weaponry ability.

Historically, the earliest known example of a spring loaded blade goes back to the 18th century. The majority of those from that time period seen in museums and galleries today are from the British and French origins. Today there's a large number of companies as well as custom makers of automatic OTF knives. High quality built automatic knives are created right here in the USA with American supplies and labor. Government departments, military units, emergency personnel and even lovers of knives will find a wide variety of OTF knives to suit their needs and interests.

Hence, if you are interested in Microtech OTF knives or automatic knives of any size, make or model, be sure to do your research and study all of the available choices. You will find a range of prices to suit any financial situation in addition to a variety of makes and models to fit your selected purpose.
