Canvas photo printing with images by Andrew Bourke

Article published on March 17th 2012 | Photography

Did you know that you can have your photos printed to canvas, thatâ€™s right itâ€™s something that take little effort but itâ€™s also something that give you amazing results and you really have to try it if you havenâ€™t do so before. I know lots of people that have done this and all have said the same thing and that would be that they are so happy with their canvas photo prints because it brings a warmth and artistic look to their home and it also very cheap to have done to and we all know that in this current economic climate with everyone a little strapped for money these days then you want getting something for your home that not only is brilliant quality and cheers you up but also something that does cost that much to and thatâ€™s always an added bonus.

Canvas prints and canvas photo printing has been around for a very long time now and it seems that it getting more and more popular with lots of people getting their own homes and having their own space to experiment with their wall decoration, itâ€™s also very good that you can have photos artwork and lots of different effects and styles done with your canvas prints to so itâ€™s basically whatever you can put your imagination to and what you think would look good as at the end of the day the canvas printers job is to put your memories that you have from your photos onto canvas and its really does work and brings them to life which is the most important bit if youâ€™re looking for a modern looking piece of wall art that has a very modern and yet different look to it to.

Just think what it would be like having your photographs printed onto a textured canvas that is wrapped around a real wooden frame, its breath taking stuff and itâ€™s not even that expensive to have done either, all you have to do is send across a high resolution photo or image to the canvas printers and then they will do the work for you. The canvas prints is basically an image that is sized through Photoshop and then is printed onto canvas through a large format printer then stretched and stapled onto a stretcher bar wooden frame and thatâ€™s all there is to it but the effect really are out of this world and I would recommend it to anyone to try and have done.

So if you do find yourself looking to have a canvas print processed through a professional canvas printing business then all you have to remember is what you want it to look like and that you want to keep your budget low to because you really donâ€™t need to spend that much to get a quality canvas print and if you can confirm with the canvas printer what you wonâ€™t done ie meaning if you wanted certain parts of the image cropped of chopped away then if you tell them then itâ€™s never a problem and they are very happy to help you have your canvas print printed just the way you want it.
