Article published on May 16th 2012 | Photography

Iâ€™m here today to help you with your interior design solutions and to help you decide what would be the best way to decorate your home. Letâ€™s start with the size and the space youâ€™re working with. If space you have is something of a small area then to make the area look big then we would go with maybe painting the wall magnolia and then maybe purchasing some small canvas photo prints to hang on the walls to give it a warm feel as most people do like the painted wall look but sometimes it can look a little cold so by adding some canvas prints to the room you will give it the warmth back.

So that is the walls from a small room, letâ€™s say you have a large room that you want to decorate it with some wall decoration then a good idea would be to get some canvas prints of some family pictures and have them printed at A1 size, this would enhance the look of the room by leaving it looking comfortable and stylish at the same time. You can get some brightly colour canvas prints or you can go for a black and white themed canvas print, whatever you choose normally the canvas prints do their own blending in so you donâ€™t have to worry too much about what colour they are unless for example your colour scheme is browns creams and beiges then maybe a sepia colour canvas print would be the better option for you.

Now a big part of hanging certain photography product when decorating your living space would be to get the lighting right and this is a bigger part of it that people tend to think as if you get the lighting right along with the correct positioning of your canvas prints then it can make the biggest difference. The good thing about a room with a window in to is that it gives of natural light and this is the best light you can get, one being that is free and the other is that the light give you what you can see rather than having a dimed light that will create lots of unwanted shadows, so use this natural light to its full potential and even if you put the canvas photo print in direct sunlight so that is face on with the window this will give the canvas print a brilliant presence in a room, as would having a spot light that shines down on the canvas prints, any sort of photo on canvas or design or even artwork would look great under a spot light canvas print.

Another good place to out canvas prints is lined up along a hallway wall. This not only give the wall space some more reason but it also give the wall space a more longer corridor loom that will make your hallway look longer of your looking for this modern contemporary look. I hope this has helped with your wall decorating ideas and remember when youâ€™re purchasing any sort of wall decoration that includes a print from your own photo or image to try and get a picture that fits in with the mood of that room to get the fullest o benefits it can offer.
