Simplify Your Movie Making Experience with the Proaim Gold Pan Tilt Head by Brent Crosby

Article published on November 25th 2011 | Photography

The proaim packages of camera equipments that are used in the production of movies are made in an excellent manner. There are many people who have been using these equipment with great success. This is one of the best equipments because of the complete control that you have when you use them. The pan tilt head and also the gold pan tilt heads are different in some aspects. They have almost the same features, but their effectiveness is different. The pan tilt head is able to provide a smaller radius of coverage, whereas the gold pan tilt head is able to provide you with a greater versatility.

The equipment is very effective in your film making because you are able to create shots with great smoothness. You will be able to manipulate the camera and the shots by standing in a remote area. All you have to do is to make the camera move and pan or tilt from the remote place. The joystick is connected to the heads and the movement of the controls on the joystick controls the position of the camera. The power is provided from the car battery that is attached to it.

You will be able to move the cameras to create different shots. Panning the camera and also tilting it for particular shots are easy because of this equipment. The panning and the tilting can be even up to about 360 degrees. This gives a great degree of freedom to the person who is creating the movie. The length of the cable from the controls is about 23 feet. So, you will be able to create a unique experience without directly handling the equipment. Since the jib arm can help to add the height, you will be able to mount the cameras on the head tripod.

Tripod head is generally a part of tripod system attached with supported device to tripod legs. A tripod head offers the orientation of device. Tripod heads like modular or stand alone allows the user to choose according to the suitability. Heads are directly built with tripod legs in order to reduce the cost of tripod system. There are distinct types of tripod heads available to offer providing different control mechanisms. You may find some occurring to move in single axis but various others offers robotic movement to increase the precision of movement during shots. Physical designs and the use of materials may be distinct may be different according to the purpose of the usage.
