Video Games -The Nonstop Entertainment for People of All Ages by Mark Bennett

Article published on January 12th 2012 | Recreation

On an average, many people spend about six to ten hours playing video games. Not only in the United States, but in other countries the main kind of recreation is playing video games. Whether it is PS3, Xbox 360, Wii, people just get hooked on the entertainment and pleasure of playing video games.

It is also a known fact that there is no physical endurance involved in playing video games, besides moving our fingers. Seriously, playing video games will give exercise to your fingers.

Now what makes video games so interesting? Frankly, it has to be the visual experience. This visual experience not only gives you an exhilarating feeling but also takes to another dimension. In this dimension you can do things which are impossible in the real world. You can go on a killing spree, manipulate criminals, create empires, change history, create war between countries, etc. The list goes on and on.

The ability to do these things just makes a person play different genres of video games. Sometimes while playing them he or she just forgets the distinction between real and unreal world. Whether it is fantasy video games like Dragon Warrior II, Monster Hunt 2, etc, video gamers assume they are real and sometimes try to do things that are possible in these games in real life.

Sometimes you may feel this is absurd, but it is true. Most of us just give into video games. Why? It is simple. The visual experience, the storyline is just like watching a movie. Logically we know that these are untrue and impossible. For example, in the Mortal Kombat game, you can turn a person's head 360 degrees round continuously and shoot a person with thunder lighting. Even the characters are quite frictional like fighting with ghost, monsters, etc.

Now the thing is video games are not bad. If you are a person who hates bloodshed or fighting, you could play other genres of video games. They are strategy games like Shogun Total War, Spartan Total War, Total War Shogun 2, etc which requires strategic planning, skillful thinking to win the game. You need to analyze and dust the rust of your thinking brain cells to play these games. You act as a military general and make sure that the number of casualties is less. Besides having fewer casualties, you also need to win the war and protect your people.

Vehicle stimulation games provide excellent realistic interpretation to gamers in operating vehicles. You don't need to know how to drive a fighter jet or even have a license to drive fast paced cars. You just read the instruction, know which buttons to press to handle the vehicle and just jump into the game. These games will give a feeling of real life experience which is hard to forget and resist.

Construction and management games test your management and business skills. These games take you to a level of planning, managing and real life situation. For example, in games like SimCity, you need to manage disasters, problems that are possible in real life. You could experience natural disasters like cyclone, tornadoes, earthquakes, and fire. In the game you need to handle these disasters and their aftermath. It not only tests your planning skills but also your quick thinking.

The same is the case with business simulation games. They test your business skills as well as marketing skills. You need to analyze the customer's requirement, hold marketing meetings, marketing analyzes. Besides these things, once the product comes on the market, you need to know the customer response and check whether they are satisfied or not. If not then you need to rethink your strategy and start from square one. Man! It is just like managing a real company.

In short video games are a wholesome entertainment package. They can be sometimes incompetent but you just cannot resist them. You still get hooked and find it pleasing. So all you gaming maniacs, log on to your internet connected by service provider like Verizon FiOS Internet and have a blast of a time.
