Article published on March 8th 2012 | Self Help

Recently many of us would be searching on the internet, for a good self defense product. The outer world is filled with crimes, assaults, and many terrorist attacks, and hence it has become a necessity for the normal person, to step out with a handy personal defense product. I had read many articles and came up with many reviews, and researched on all the products. I want to present the best self defense product to my readers and friends circle. I was trying out my hands on many of the products starting from the pepper spray, Tazers, stun guns and many more. But one essential thing in this is to have a provision of a handy self defense product. Because, when you have a big packet or device to attack you assailant, it will take more time for you to use the product, and by this time, your attacker would have completed his job, before you could reach for your self defense product.

If you have given in a thought for the Tazers or the pepper sprays, and want to know the difference between he two, then let me inform you that the pepper sprays are self defense containers which will incapacitate the attacker for a few minutes. The Tazers are again self defense device which will hurt the attacker even more. The Tazers can be used at any time and at any place or at any day or at any situation, when you predict danger from anyone. If you need to know more of the facts, then let me tell you in detail of the Tazers. Tazers are like the guns. People, who prefer the cartridges with H2O, can carry this bulky weapon of gun either in their pocket or purse or clutches. But pepper sprays are very compact and it fits easily in to the palm and comes in their grip easily.

Tazers shoot out two projected darts straight into your attacker's flesh which will immediately generate a terrible paralysis, and will simultaneously give you time to think as to what you can do next. Tazers will have an effect on the person only for a matter of few of minutes, or in fact it is a temporary aid. When the attacker is darted by these Tazers, they loose their self instantly and fall to ground straight away, but let me inform you they will recover soon, more sooner than the pepper spray attacked ones. Tazers are generally preferred by the men folk, rather than the women folk, as they have a great confidence on their targets. Tazers are sure to immune the person for nearly ten to twenty minutes. The Tazers can also be used by women under many instances like, it can be used on a person, who comes on a bike and tries to pull off your neck chain, or any person, who tries to near you with a bad notion or it can be used on a stray dog or wild animal which is backing you. You can just target and protect yourself by using your Tazers.
