Article published on March 3rd 2012 | Seo

It has been noticed in the past and today also that when the competitors cannot survive in the market with pure quality and talent they try to defame the best and in that way get some customers or clients. The same is happening to seo next where its competitors are trying to defame the company with names such as seo next scam and want to divert the customer base towards them. As the company is a well settled company in SEO the clients are not going to get effected by the SEO next bad reviews because no matter how many seonext complaints are found on the internet they know that none of them has any base.

The seo next reviews that you get in the search engine result are all keyword optimized by the ill minded SEO companies which are at the same time their competitor. They generally optimize keywords such as www.seonext.com complaints and www.seonext.com reviews and when people search for the reviews they get the results as negative. This is a trick to defame a company and mislead customers so that they take the second or the third or even lower options in the SEO industry. This is not only about defaming the competitor in the unethical way but it also includes cheating customers which is even more unethical.

The company seo next wants to save you from these ill practices and wants you to contact their genuine customers so that you get the correct response. The company known that its current clients are not going to trust these seo next reviews because the service that they get from the company is the best in the market. The only attempt of the company is to lead the prospective customers to the right direction.
