Article published on December 2nd 2011 | Shopping

Each year, manufacturers vying for a fruitful artificial Christmas trees sale and growers in the business of raising live Christmas trees go head-to-head, trying to prove to consumers their option is best. But a good chunk of the population will be compelled to shop for artificial Christmas trees regardless of the arguments. They prefer faux trees for convenience and cost-effectiveness. If youâ€™re in this pool of smart shoppers, read these great tips on buying a quality fake Christmas tree that youâ€™ll proudly display this Christmas, and many thereafter.

When a Tree is Not Just a Tree

One of the reasons many consumers gravitate toward an artificial Christmas trees sale is there is a plethora of tree choices you simply canâ€™t find at the tree farm. Of course, you will have plenty of traditional evergreens to choose from, but if you want something unusual, you will be thrilled by todayâ€™s selection of alternative trees. Here are some options available to shoppers who go faux:

-Flocked Christmas trees

-artificial Christmas trees decorated with berries and pinecones

-tinsel trees

-colorful Christmas trees

-upside down Christmas trees

The Right Price

After three or four seasons, an artificial Christmas tree essentially pays for itself. Thatâ€™s putting it simply. Of course, the price of your tree will depend on a number of factors. A commercial business can expect to pay $20,000 or more for a giant artificial tree for a massive holiday display. The majority of customers can expect to pay between $100 and $500 for a quality tree, depending on the artificial Christmas trees sale you find. Of course, size and style play a large part in determining the price. Another major factor is material. Most Christmas trees are made from either polyvinyl chloride (PVC) or polyethylene, and sometimes a combination of the two. You will find that PVC trees are generally less expensive than their PE counterparts. They generally are less expensive to make, have softer needles and require more shaping and fluffing when you set them up. PE trees feature stiffer needles, and some think they look more natural than PVC trees. However, the difference in their realism is minimal, so if you want to save a little money, donâ€™t think twice about ordering a PVC Christmas tree.

All Lit Up

Pre-lit trees are almost as common as unlit Christmas trees in the artificial tree market, so there is no need for you to take the business of lighting on yourself if youâ€™d rather not. Common options available at an Artificial Christmas trees sale are LED and dura-lit lighting, in white, clear, and multicolored varieties. But if you enjoy decorating your Christmas tree soup to nuts, follow this wonderful tip to prevent your lighting strands from becoming snarled: wrap your lights on a large spool (think cable wire) for storage, and when youâ€™re ready to hang them, unravel them like a kite string around the tree. The end result is a neatly-lit tree, no tangles necessary!
