Australia had been the leader in the international market of generators, invertors and petrol engines since past so many decades and still they continue at the top of the generator market. Australia generators manufactured by various reputed power products manufacturers of Australia are known for their reliability and durability. The generator manufacturers of Australia are having world-wide network for marketing their generators and allied products and as a result their products are available world over. Apart from the quality, the generators made in Australia are eco-friendly and they function without generating much noise. In addition to diesel portable generators, battery chargers, 4-stroke petrol engines, Australian companies also manufacture multi Power-Packs that consists four vital power equipments â€“ welder, generator, battery charger and air-compressor. The wide an innovative range of Australia generators also include the standby diesel generating sets and Tractor driven alternators. These products have wide application in domestic, commercial and dairy sectors.

The inverter generator which is petrol powered and operates in 4 strokes is one of the latest products of Australian power generation technology. These generators are very much portable and they have a compact design also. They ensure production of clean electricity and are safe and convenient to use as well as transport. Besides using as a alternate power source, they can be used in automobiles, fishing boats and in other sophisticated power devices. Inverter generator made in Australia never fails in quality and durability.

The multi-purpose petrol engines from Australia are in the range of 4 â€“ 12 hp. The interesting features of these petrol engines with compact designs are that they ensure minimum fuel consumption; they have electric starters and are portable. Australian made diesel generators are quiet operating and are highly efficient. They start automatically and are ideal for washing machines, microwave ovens and air conditioners. Generators made in Australia have minimum two yearsâ€™ warranty and also they have separate certifications in various aspects of quality and performance. The digital inverters from Australia are specially designed for camping and caravan.

The wide range of petrol and diesel generators from Australia - portable as well as stationary â€“ are custom made for different applications and are provided with automatic and wireless starters. While the Australian portable generators ensure trouble-free power holidays for fridges, TVs, air-conditioners and lights the inverters ensure uninterrupted power supply to computer systems. The sine-wave inverters that are controlled by micro-computers are the most ideal for computers. Comprehensive technical support as well as after sale service is ensured for the Australian power generators.
