Buy the correct dehumidifier for your home by [Glyn Jones](#)

Article published on June 12th 2012 | [Shopping](#)

When you're searching for a few simple solutions in basement waterproofing for your home, one of the best methods to eliminate condensation on the walls, lower the humidity level, and get eliminate that musty smell, is by using an aura dehumidifier. Listed here are three strategies for obtaining the most from a garage dehumidifier or any one you decide to use.

Get The Correct Dehumidifier

This primary tip is among the more essential ones. Getting the right size of basement or garage dehumidifier is crucial. For those who have a 2500 square foot basement and you are trying to make use of a small machine that is designed for a single room, then you're not likely to cash success. You may need several unit in some cases.

The bottom line is to get a big enough model to do the job. For self-evident reasons, larger the size of the moisture absorber, higher the cost and excellence of the domestic dehumidifier. The best dehumidifier for the cost will last longer as well as become more efficient because it will consume less energy. This is so because bigger models won't have to operate constantly and work on getting out the moisture as the smaller units do. It makes sense less cash going to your energy bill.

Placing The Dehumidifier

This might seem obvious, however, you would be amazed at where lots of homeowners will put their air dehumidifier. Place the air dehumidifiers in an open area where there aren't any boxes or other items sitting upright alongside it. For ultimate performance, you want to possess the air flowing freely towards the unit. Some models will instruct you to place them against a wall in the basement, so be sure to read the users manual and know very well what type of unit you have. Another big key in putting it in the right spot would be to allow for water drainage. All dehumidifiers have a drainage container that you empty out, but what happens if you do not reach it over time, or else you no way, and water is out onto the floor? For those who have a basement drain hole, you are able to sit the unit right next to it so the overflow goes down the drain and not on the floor. Alternatively, you can fasten a drain hose and run it to the basement drain.

Ensure that it stays Clean

This really is another essential tip that will have a big effect on the performance of your air dehumidifiers. Be sure to keep it cleaned and effectively maintained. Every dehumidifier will have coils that can end up with dirty with time. Wipe them down from time to time and keep the vents clean from cobwebs, and mud as well.

These pointers will go a long way to keep your air dehumidifier running well and removing the moisture out of your basement.
