Contemporary Engagement Rings by Jacob

Article published on March 10th 2012 | Shopping

Customised, modern engagement rings are a trend in the engagement industry today and you can choose from various different and non-traditional metals, stone colours and jewel cuts. If you are thinking of buying a modern engagement ring, an expert jeweller may have pioneering ideas beyond what is shown in their display case. For your first consultation, bring your ideas, preferences and an open mind in order to select the best contemporary engagement rings.

Yellow gold for engagement rings was the customary choice. Today's trends for recent engagement rings generally centre on the silver colours, with white gold, platinum or even titanium. Titanium is particularly a popular selection for men's rings with its deep gray colour that can be shiny or matted similar to a nickel finish. Modern engagement rings often use mixtures of metals or inlays of different metal colours with custom designs.

Diamonds have conventionally been for the bride, but are showing up in men's engagement rings. Brides selecting from trendier rings are also leaning towards coloured diamonds, sapphires, emeralds and other coloured gemstones rather than the traditional diamond. One advantage of using different gemstones over the traditional diamond for modern engagement rings is the price.

Modern engagement rings are typically exclusive with high quality gemstones. There are numerous gemstone selections that may not be familiar to a couple. Instead of the traditional period or emerald greens, choosing tourmaline, a rare but beautiful green stone could be an option. Sapphires can provide a beautiful deep blue, but tanzanite comes in sparkling shades of blue and purple. By consulting with a jeweller and opening with colours you may like, your jeweller should have some ideas for stones that you may not have been aware of, such as pink diamonds or white topaz.

Contemporary engagement rings frequently use square, princess cut diamonds as solitaires for engagement rings. Small diamonds coated across the engagement band in a refined setting is also common. For engagement bands or engagement ring, using the same shape of stone typically depicts the clean, streamlined style of modern engagement rings.

Before making a ultimate purchase decision you may want to take some time to judge the options for many modern engagement rings. A professional jeweller or gemstone expert may help you to broaden your idea of engagement rings to create a memorable, symbolic piece of jewellery that will be treasured throughout your married life.
