Design Your Own Ring: One-of-a-Kind Custom Engagement Rings by Aiden William

Article published on June 19th 2012 | Shopping

There no better expression of what she means to you than designing your own engagement ring. When you design your own ring, you have unprecedented access to one-of-a-kind custom engagement rings; the perfect representation of your once-in-a-lifetime love.

Engagement ring shopping, to be truthful, can actually be a little daunting. So the â€œdesign your own ringâ€• option may not have occurred to you as a viable option, especially if youâ€™re overwhelmed by the unfathomably large selection of pre-fab engagement rings already. But think about it â€¦ you most likely have in your mind, already, a vision of what the perfect ring will look like. You already know her preferences, as well. What better way to present her with a diamond engagement ring thatâ€™s perfectly suited to her than by designing it yourself.

Design Your Own Ring with Professional Guidance

Now, itâ€™s not like youâ€™re going to be taking on this project solo. When you design your own ring, the process is guided each step of the way, with professional tools and available expert guidance when you need it. The usual process behind custom engagement rings goes like this:

STEP ONE: Select a loose diamond. Your diamond solitaire can be chosen by size, color grade, clarity and cut. You can even enter a preferred budget, allowing you to view only the diamonds falling within that range.

STEP TWO: Once you have chosen the perfect loose diamond, itâ€™s time to select a setting. Donâ€™t worry about choosing a setting thatâ€™s not appropriate for the stone youâ€™ve selected; the description accompanying each ring setting tells you the solitaire shapes and sizes for which it is most appropriate.

STEP THREE: Diamond solitaire rings are very traditional and beautifully complimentary to the right finger, but hand shape is something that should be taken into consideration when you design your own ring. This is just one of several reasons you might consider taking the design process one step further, with the addition of some diamond accents. Diamond accents not only add luster to custom engagement rings, but they can also have the effect of making the center stone appear even larger than it actually is.

PAWN SHOP OPTIONS

Pawn shops can provide cash for gold with a couple of different options. The first option of pawning your jewelry involves a cash loan with the jewelry held as collateral. If the loan is not paid off by the agreed upon terms, then the shop owns the jewelry and usually puts it out for sale. Pawn shops will also make an outright purchase though, if you donâ€™t want the piece back. Like a jeweler, a pawn broker will often make concessions for trading items for jewelry, as well.

With both of the above options, itâ€™s important to remember that the primary reason for the cash for gold exchange on the part of the retailer is with the intent to resell the piece for a profit. So the price point you have in mind based on a piece of jewelryâ€™s estimated value is likely not the price youâ€™re going to get. These are still worthwhile entities to consider, however, as you can sell your gold the same day in many cases; cash in pocket.

STEP FOUR: Unfortunately, the last step is where professional guidance from a diamond expert

can no longer assist you. Youâ€™ve got the perfect ring, custom designed â€“ by you â€“ expressly for he Now itâ€™s time to pop the question! But when she sees that you cared enough to take the time and extra effort to design your own ring, thatâ€™ll just be one more element of charm in your favor. Good luck!
