Different Types of Smoking Pipes and One Hitter Tubes by Barclay Baker

Article published on December 29th 2011 | Shopping

Smoking pipes or one hitters, also known as bubblers come in variety of materials, shapes and sizes. Different slangs are used for naming them, depending upon their structure or shape. In this article, we will discuss different materials that are used for manufacturing these tubes.

1)Clay tubes: Clay tubes are suitable for smoking tobacco. In case youâ€™re planning to purchase a clay-made tube, itâ€™s best to invest extra bucks on getting an expensive yet durable pipe rather than opting for a cheaper one. Cheap pipes are porous and result in odd flavors and poor smoking experiences. Good quality tubes offer pure smoke thereby enhancing your smoking experience.

2)Glass pipes: Hand blown or Pyrex glass pipes are not only reasonably priced but also, very beautiful and creative. These tubes are easy to clean, transparent and easily repairable. They come in plenty of shapes, sizes, structures and colors. The best thing about using a glass pipe is that they donâ€™t react with smoking herbs so you can safely use them for herbal smoking.

3)Metal smoking pipes: Theyâ€™re cost-effective and manufactured using different metals and alloys like stainless tell, brass or aluminum. Theyâ€™re universally available at different shops and are commonly used for smoking tobacco or cannabis. A few down-sides associated with these tubes is they heat up very quickly (hence it is advisable that you use a long pipe) moreover they react with different herbs to produce offensive odors and tastes.

4)Glass bubblers: They are widely used smoking pipes that resemble a hookah pipe. Theyâ€™re larger than a standard smoking pipe and smaller than hookah structures. Theyâ€™re made up of Pyrex glass and comprise of a bubble shaped bowl that is connected with a slender glass tube that encloses an outlet for smoke emission. Theyâ€™re identical to a glass tube however, with a slight difference that theyâ€™ve water filtering structure and smoke cooling abilities. They are made up of two semi-circular bowls fused together which makes them expensive and vulnerable hence youâ€™ve to be careful while handling them.

5)Corncob: This is a widely used cheap quality material for manufacturing tobacco pipes. Theyâ€™re good for first time smokers and those folks who wish to invest a small amount in purchasing pipes.

So, these were some common materials used for manufacturing pipes and one hitter tubes. You can choose any material that suits your requirements.
