Article published on December 14th 2011 | Shopping

If you love to watch movies in a homely ambiance, a home theater system is an ideal device which you require. A home theater system is a compact set and there are a variety of factors which you need to consider before buying it. The channel is one of the most important factors which should be provided due importance. When you are buying a home theater system, you usually find channel such as 5.1, 2.1 and 7.1. The first digit among the numbers stands for the speakers. Instead, the .1 stands for the sub woofer. The sub woofer is a very important aspect of a home theater system.

When you are watching a movie various types of musical elements are present. These musical elements like classical, blues or jazz comes out the best with the help of a sub woofer. The total measurement of the woofer also plays a very important role. You should always choose woofers which are 10 or 12 feet in length. The DVD quality of the home theater system is also one of the most important factors you should consider. The output conveyed by a DVD player in a home theater system can be easily compared to a television broadcast.

The 480 I output is the normal result you should look out from the dvd player of a home theater system. But the 1080 I output is also available in the market which offers a far better resolution while watching television. The video output which the DVD player provides you also plays a key role. The video connection which comes with the home theater system should also be component. A component video is very useful as it can transfer HD and upconverted video signals. It is all the more better if you have an HDMI connection. The HD signal is transmitted by the HDMI connection and a single cable for video and audio is used.

When you are considering factors for buying a home theater system, the PMPO and the RMS cannot be missed out in any way. Both these factors are related to sound output level. A subtle difference usually persists between each other. RMS means rates per second and PMPO can be termed as Peak Music Power Output. You should also check the ports which can be directly connected with the DVD player. Both HDMI and USB ports can be used but their output should be examined well in advance.
