Finding Your Ideal Tablet PC for Less

by Sandra Vaughn

Article published on August 8th 2012 | Shopping

Tablet PCâ€™s are everywhere as they offer a get deal of functionality and convenience all in one small package. With all the brands and models it can be hard to find a tablet that fits both your budget and your needs. This article covers helpful tips to find your ideal tablet for less.

What to Consider when Choosing a Tablet PC

Display Size:

Ideally, your tablet PC should have a wide, clear screen. You should consider its size, display type, and resolution. Tablets are usually marketed from seven to ten inches. If you are going to use the gadget for school or work, it is advisable to choose a model with a larger screen. However, if you travel often, it may be better to go with one with a smaller screen.

Type of Display:

Take note that there are a couple of display types: capacitive and resistive. Capacitive screens have excellent image quality. They are accurate and allow the simultaneous use of several fingers. They are quite expensive, though. Also, they cannot be used with regular pointers. Resistive screens, on the other hand, are less expensive and are resistant to water and dust. They can be used with your finger or with a stylus. Then again, they are not as accurate as capacitive screens and they tend to lose up to twenty-five percent brightness.

Screen Resolution:

As for the resolution of the screen, keep in mind that the higher the pixels, the better. If you want to see clearer images, choose a tablet PC with 1024 x 600 pixels. Anyway, aside from the size, display type, and resolution, you should also consider the mark and the connectivity.

Connectivity:

When it comes to connectivity, you can expect nearly all tables to come with Wi-Fi. This means that you can connect to the Internet whenever you want as long as you are in a place with Wi-Fi. However, if you want to be able to connect to the Internet from any place without relying on Wi-Fi, you should choose a tablet PC with 3G support. You should also get a data plan from your chosen carrier. It is a bit more expensive, but it would be more useful for you.

Not all stores charge the same prices for tablet PCâ€™s. If you want to get the best value, look for reliable gadget reviews. You may also take advantage of promos and discounts in malls. If you are buying online, be careful. Make sure that you read the specs, as well as understand the return policy.
