Article published on July 12th 2012 | Shopping

HDMI cables are the High-definition Multimedia Interface Cables and they are digital data transmitters that are capable of transmitting uncompressed data. Both audio and video digital devices can be connected through them and in addition to set top boxes, they are also capable of connecting video games, blue-ray discs and even personal computers. They are capable of supporting all video formats on televisions and computers and the output offered by them will be high quality with standards and enhancements for nearly seven audio channels.

They were initially designed in the year 2002 and they are being produced by almost all outstanding companies in the field of electronics. The high definition television sets in Europe were labeled with the inclusion of these cables that got their formulae in the year 2005 by EICTA and SES Astra. From the year 2006, hi-tech camcorders and digital cameras began to use these cables and the dealers are making record breaking shipments.

These HDMI cables are being manufactured in different versions and each of these versions is offered with a unique number. They are capable of offering crystal-clear digital video and audio through a single cable thereby resulting in simplification of cabling process in homes. When this cable is used consumers need not get the disturbance of several wires running on their homes for connecting the home theatre and television. They are capable of providing interface between set-top box, DVD player, audio/video receiver, audio/video monitor and digital television.

When making use of these cables, the users will have to ensure that both AVR System and DVD player supports the HDMI output. With the help of the cable, the digital device has to be connected to the HDMI connector on the monitor of computer or television and digital device of the HDTV should be configured accordingly. When a user wishes to use HDMI connection from DVD player or set-top box for hearing audio through these cables, the audio has to be set to PCM or HDMI from the on-screen menu of the device.

Nowadays, some of the best dealers are selling these cables online and they are offered in varied lengths from as minimum as 1.5 feet to over 25 feet so that users can connect the electrical equipment located at distant locations as well. When it comes to quality of the cables, some of the dealers are selling high quality materials and selection of the best online store can ensure the purchase of the best wires for the users.
