Washing the interiors of the Patio Heater:

Note: Always be certain the patio heater is cool, with any gas supply disconnected in the patio heater.

Take away the hood or reflector and emitter screen of the outdoor heater. The various components are often mounted on main burner housing with four screws. Once this really is remove, you'll have accessibility main burner, pilot and thermocouple.

Take away the main burner, that is usually mounted on a bracket with between 2 to 4 screws. When the main burner is taken away, you'll have accessibility main burner orifice. The orifice a little brass fitting having a tiny hole, measured in gauges. This tiny hole may become clogged or obstructed through the debris, nest or web, left through the spider. Since hardly any or no gas can go through the obstruction, the outdoor heater won't produce a flame or may have a really yellow sooty flame.

Having a wrench or socket set, remove this orifice to clean. To wash, use compressed air or perhaps a needle to get rid of any obstruction.

Look into the pilot for just about any other obstructions. Occasionally, the pilot orifice, such as the main burner orifice, may have leftover deposits through the spiders. This brass fitting may have a level smaller hole the main burner orifice. Taking out the pilot orifice could be tricky, as different manufacturers will secure the pilot in various manners. Most pilots, however, is going to be attached to a bracket holding the pilot and thermocouple. Loosen this bracket which means you may have free accessibility pilot. The pilot orifice is going to be on the surface of the small copper tube and merely underneath the pilot. Take away the pilot after which take away the pilot orifice. Clean the pilot orifice very much the same because the main burner orifice with compressed air or perhaps a needle.

Around the main burner, there must be two openings close to the bottom from the burner, they are known as the venturi. Ensure the opening are evident associated with a obstructions, so air could be mixed properly using the gas.

With all of patio heaters parts cleaned, reassemble all of the parts backwards order previously mentioned, but don't reattach the deck heater hood (reflector).

Reconnect and switch on your gas supply towards the patio heater. Following outdoor heater operation manual, light your patio heater simply to the pilot position. And keep the control knob depressed within the pilot position, check and find out the pilot is lit, using the flame touching the top thermocouple. Once you have take a look, release the patio heater control knob (about 30 - A minute) and also the pilot should remain lit. Whether it doesn't, wait for a patio heater for cooling and stick to the pilot orifice cleaning instructions above. reassemble and lightweight the pilot again.

When the pilot remains lit, turn the patio heaters control knob towards the high position. When the main burner orifice was cleaned properly, you need to visit a Four to six inch blue flame with orange-yellow tips. When the flame is nearly all yellow, then your obstructions within the burner venturi weren't cleaned properly. The venturi allows air to combine with gas to lose clean. If no air mixes using the gas, a yellow and dirty flame is produced.

Using the pilot and main burner now in perfect operation, wait for a patio heater for cooling then reassemble the emitter screen and hood back to the housing bracket, utilizing the same screws provided

Light your patio heater as well as your in business and able to have an execllent party, gathering or outdoor dining experience once more.
