Article published on July 20th 2012 | [Shopping](#)

Designing an office can be the most daunting task to manage. There are several factors to think about during Office Design and decoration procedure. Always remember that the concept of office design is entirely different from residential home decoration. The type of furniture items to be included within office space will also differ a lot from those that can be seen at residential houses.

When decorating an office, Commercial Furniture items are mainly required. These are a bit different from those furniture items being used for residential homes. Commercial furniture items are bigger, yet have a sleek and stylish appearance. While manufacturing these types of furniture items, focus is given heavily on the quality. In most cases, genuine wooden furniture items are installed within office premises. Table and desks are mainly made from pure hardwood.

While speaking about chairs or sofas, then metal ones are more preferred. Revolving chairs are not made from wood. Rather, they are made from metals like iron, nickel, and aluminum. When it is about sofa, then leather sofas with strong metal frames are mostly preferred. Among the other furniture items, locker and almirahs are mostly made from strong iron which makes them long lasting and offers additional protection.

Plywood lockers for employees are also seen at some offices. However, they may not be the safest option when storing important official documents or some other materials, including money. They can be easily broken. Moreover, plywood lockers face dampness during monsoon as well winter season. Growth of fungus may affect the items placed inside. Hence, it is always better to go for metal lockers within office premises. They are tough and do not get affected due to wet or damp weather conditions. Strong metals like iron and steel are tough to break even.
