Plasma TV Reviews â€“ Read before you Go and Get One! by Jon Smith

Article published on March 6th 2012 | Shopping

So, you want to buy a plasma TV! Have you zeroed in on one yet! No. Well good, because you can go through the plasma TV reviews out there to help you make an informed decision. I did the same. It helped me choose a plasma TV that I knew had got a good review from users.

EDTV and HDTV comparison

Before reading the Plasma TV reviews I was unaware of the fact that plasma TV can be classified as EDTV or HDTV. EDTVs offer users a native resolution of 852x480, while HDTVs offer you a resolution of 1024x768 or more. Arguably, a plasma TV offering an HDTV resolution is the better bet. Most plasma TVs these days are HDTV. But, itâ€™s always important to check the resolution figures to know whether itâ€™s really HDTV or EDTV.

â€˜Brightnessâ€• is it really an important aspect?

Well, going through the various plasma TV reviews, I understood that itâ€™s definitely an important aspect to consider while making a choice. When it comes to a plasma TV, a brightness rating of 550cd/m2 or more is considered ideal. But at the end of the day, donâ€™t give too much importance to the figure. Check the picture quality and if you think the brightness of the screen satisfies your needs and requirements, just go for it.

Device connectivity

People focus on the contrast ratio, scaling, or tuner consideration, but forget one important aspect, which is connectivity with other devices. It was not until I went through a collection of plasma TV reviews that I realized the importance of this feature. These days all Plasma TVs are configured to work with all existing video components like S-Video, standard AV etc. But, you need to make sure that the Plasma TV you choose also offers DVI or HDMI connections. Also, you can even go for a Plasma TV that offers you a VGA input connection. This will help you use it as a monitor for your PC.

You donâ€™t have to search far and wide for Plasma TV reviews. The internet is full of exhaustive reviews that tell you all that you need to know about a particular model. Read these reviews before you actually go and buy a Plasma TV.
