Select cheap eyeglasses for your kids with utmost care by Roger Schultz Optical

Article published on December 12th 2011 | Shopping

There are plenty of options as far as children eyeglasses are concerned. From metal child eyeglasses to the plastic ones, polycarbonate lenses to glass ones, there are wide ranges of choices available for your children eyewear. Whether you are buying cheap eyeglasses for your kids or looking out for designer eyewear, you have to be very careful while selecting them. There are certain aspects which you cannot afford to ignore while selecting metal child eyeglasses or any other eyewear for your kids.

Frame type

In the market, you will generally come across metal child eyeglasses or plastic eyeglasses. Most of the manufacturers produce metal child eyeglasses almost similar to the adult styles which are often admired by children. If you are planning to buy cheap eyeglasses for your kids, glasses with plastic frames are the best option. Children's eyewear with plastic frames are extremely lightweight, durable, cannot be easily bent or broken and also very reasonably priced.

However those who do not have any budget constraint can easily select metal child eyeglasses as they too are manufactured with almost the same features as that of plastic eyeglasses. If your child is allergic to certain metal, you can opt for discount eyewear with hypoallergenic materials or ask your optician to recommend the best alloy for your child.

Lens

While buying discount eyewear for your kids, you must always be careful with the lens material that you use. It is always recommended to buy polycarbonate or trivex lenses for your kids as they are extremely light weight and more impact resistant as compared to other lens material. You should totally avoid glass lenses as they are more susceptible to breakages and even cause injuries. Most of us think that plastic lenses are cheaper and therefore go for plastic in an attempt to buy cheap eyeglasses. The costs of polycarbonate lenses are almost similar to that of plastic lenses with UV and scratch resistant coating. It is therefore always better to opt for polycarbonate lenses for your discount eyewear and get that desired extra safety for your kids.

Bridges and Temples

It is recommended that discount eyewear for your kids should have temples that wrap around the back of the ear. This will avoid constant falling of the eyeglasses from the child's face. These wraparound styles are generally available in metal child eyeglasses. Though wraparound temple types enable your kids in keeping their eyeglasses in place, it is feasible only for those who wear glasses on a part time basis. If your child wears glasses on a regular basis, it is better to opt for skull temple which curves properly at the back of the ear, thereby giving a firm grip to the eyewear.

Even while selecting cheap eyeglasses for your kids, you cannot ignore the fit of the bridge of your child's glasses. Since the noses of the younger kids are not fully developed, their eyewear tends to slid down every now and then. It is therefore recommended to select discount eyewear for your kids that fits appropriately well on to the nose of your kids.

So, next time you are out in the market to shop for metal child eyeglasses or any other eyeglasses for your kids, do consider the above given aspects and make an appropriate choice.
