The natural laws of physicals apply to all matter, and all objects, in the universe. Everything around us, whether we see it or not, is acting in accordance with these laws, ensuring that everything operates the way it is supposed to and cause and effect follow one another logically. Jewelry boxes, just like everything else, are subject to these laws, and behave accordingly in situations where the laws directly apply. Newton may have had an apple fall on his head all those years ago, but a jewelry box falling on his head may have taught him just as much, if not more.

Constant Velocity: Newtonâ€™s first law states that an object travelling at a certain velocity will continue to travel at that velocity unless acted upon by another object. Jewelry boxes, in their original state, simply sit there, existing, but not doing much else. Until they are admired by human eyes, their beauty cannot be fully appreciated. Itâ€™s sort of like a tree falling in the forest not making a sound unless someone is there to hear it. Jewelry boxes cannot live up to their full potential unless they are acted upon by people, and invited into a home, given a spot from which to be displayed, and have had jewelry placed inside them.

Law of Gravity: Certain objects in the universe are large enough to attract other objects toward them, pulling them into an inescapable orbit. The sun has managed to do this to several planets and our own planet has managed it with the moon. Jewelry boxes exert their own gravitational pull, attracting to themselves those around them, drawing admiring looks and adoration for their attractiveness and class. If they are introduced into a home, it wonâ€™t be long before everything revolves around them.

For Every Action: For every action, the law goes, there in an equal and opposite reaction. When jewelry boxes are given as gifts, there is a very big reaction, both in happiness and in gratitude. The person lucky enough to receive such a gift is sure to react with both surprise and joy. It might not be the opposite of how they were feeling before, but it will be a decided improvement. If you want a gift that is sure to get a reaction, jewelry boxes are one of the best possible choices.

Theory of Relativity: Here is where the interesting stuff comes into play. The idea here is that the faster you are going, the slower time goes for you. People outside of your sphere of travel will not age or experience time at the same rate as you do. With this in mind, jewelry boxes must be travelling very fast along some, possibly approaching the speed of light, because their beauty and elegance is timeless. Regardless of how old the box or its design is, it always possesses appeal for appreciative members of any generation, past, present, or future. Whether itâ€™s a brand new jewelry box, or one that was purchased years ago, it will not have lost any of the qualities that made it so desirable to begin with.
