Uses of Double Sided Foam Tape by James Blee

Article published on February 13th 2012 | Shopping

In this world, there are some customers who have the habit of knowing the advantages that products carry before they decide to choose it. Therefore, when it comes to double sided foam tape, the same rule applies to them. That is one reason why these people can be spotted spending fanatic hours for collecting sound information for this..

For instance, the double sided foam tape can be used for number of purposes which range from cushioning in the safety helmets to sealing double glazing units. They are basically constructed from Polyethylene, EPDM, Polyurethane, PVC or Neoprene. The numerous end user applications find it suitable mainly because these combinations are actually available in different adhesive types and thickness.

Talking about the possible alternative available for supply of a double sided tape, they are normally supplied in strip, sheets, rolls and gasket formats. According to a recently concluded survey conducted by a leading manufacturer of these adhesive types, it has thrown some interesting observation..

Solvent acrylic, synthetic rubbers and pure acrylic are considered standard type of adhesives that are used for double sided tape. These tapes are obtained from either medium, low or the high density foam. It is the density that goes to determine level of compression for the foam in use. The main function of the tapes is creation of a seal. This in turn goes to prevent dust, air and moisture contaminants. The doubled sided version is preferred to the single sided version mainly because it gives great performance.
