For anybody who loves the thrill of extreme sports, a Contour HD camera is the perfect way to record those moments forever. These hands free cameras can be attached to helmets to record in perfect detail the views seen when snowboarding, skydiving, performing stunts on a bike, or any other activity.

There are many reasons why a Contour HD Helmkamera camera is the perfect choice for capturing action shots. Here are some important reasons to use this contour kamera:

â€¢ Easy To Mount - A contour actionkamera can be attached to different fixtures, including a helmet, using a range of mounting attachments. These are very easy to use, meaning that a camera can be ready to record action straight away. They are also small and light, meaning that they do not get in the way of enjoying an activity.

â€¢ Easy To Use - As well as being very simple to mount, a contour GPS camera is also designed to be extremely easy to operate. They include features such as one touch recording, and a dual laser alignment system to ensure that the camera is positioned perfectly to capture all of the action.

â€¢ Robust - As it is designed to be used in a range of extreme sports, a contour roam camera must by necessity be extremely robust. Their toughened enclosed aluminum casing means that they can withstand all of the knocks and bumps encountered during thrilling action set pieces. It also prevents any mud or sand from affecting the internal components, and these cameras are further designed to be resistant to rain and water spray. For owners of the ContourHD camera, an optional waterproof case allows action to be filmed at depths of up to ten meters below the surface of the water.

â€¢ High Definition Recording - A Contour camera records in true high definition at 1080p. This means that they capture all of the action of extreme sports in absolute clarity. If available memory is an issue then there is an option to record in 960p or 720p. The Contour Plus camera also allows footage to be streamed live in high definition through the use of its HDMI port.

Moreover, each Contour camera features an internal multi-directional microphone to pick up any ambient sounds. The soundtrack to any recording can greatly enhance the visuals. There is also a jack built in to each camera to allow an external microphone to be attached if required.

The Contour GPS and the Contour Plus both include built in GPS recording technology. The GPS system will monitor speed, elevation, and location at a rate of four times every second, making it unbelievably precise. Once the action is complete it can be viewed again in conjunction with Google Maps to give a true account of what was experienced.

There is a choice for consumers to make regarding which Contour Camera would be best for a particular shoot. Each Contour GPS is easy to mount and operate, as well as being tough and durable. They are a great way to capture point of view action as it happens.
