Article published on March 9th 2012 | Society

That's right. Thanks to a service called reverse number lookup, you can now enter a phone number into a reverse phone directory in order to find out who the number belongs to. Specifically, you will be able to gain access to the customer's name, address, his or her phone type, and find out about other members of the household.

Reverse number lookup is a service that has increased in popularity over the past decade, and is especially useful for police departments, security departments and emergency services. It helps those agencies to trace the location of the caller, which could aid them into further investigating the reports claimed. In some countries, such as the United States, reverse number lookup services are available for public use. And in other countries such as the United Kingdom, this service is only available for internal agency use.

For individual use, reverse number lookup can be especially useful if you are being bothered by someone and are unable to find out any information about him or her. There are many instances when people stalk, annoy or even terrorize others, thinking that their victims will be unable to find out who they are. In reality, thanks to reverse number lookup, if you are a victim of such unfortunate instances, then you can make use of this service in order to locate and identify exactly who your caller is. Even better, you can report the caller to the police, along with his or her personal details, in order to put your mind at rest. For some people, reverse number lookup could actually be a life savior.

Moreover, this service is also especially useful if you have been receiving the same calls repeatedly, and wish that you could find out who is bothering you so much. In other instances, some people prefer not to answer unknown or unsaved numbers. Reverse number directories can be especially useful for them too in order to help them determine whether they should return the call or not.

Furthermore, reverse number lookup can be useful for those of you who have lost their cell phones and end up with a brand new phone and not a single saved number. In this case, you are expected to receive countless of calls coming from unknown numbers. Thanks to reverse number lookup services, you will be able to retrieve the caller identity, making it ever so easy for you to store the numbers you originally lost.

The other major advantage of reverse number lookup directories is that they are capable of retrieving information about both landline and cell phone users. This is especially useful in our technologically advanced 21st century, where most people around the world use cellular phones rather than landlines. Furthermore, tracing a cellular phone is far more complex since it is mobile, whereas landlines are fixed and far easier to trace.

And the best part of all these is that there are a number of reverse number lookup directories and agencies available that offer this unique service which has been deemed to be useful for millions of people around the world.
