Antivirus software available on the web

Nowadays Antivirus security software comes as complete package containing antivirus, firewall and anti-spyware programs all in one. They are paid as well as free trail antivirus services and sometimes include one year subscription to automatic updates. There are free and excellent antivirus security softwares also available on the web. But these are free for only few months. However you won't find the kind of support which paid antivirus software provide.

Features of Antivirus security software

To keep a computer fully protected from malware attacks the user will also need a decent firewall to block unwanted contacts to the web and also an anti-spyware which spies actions of the user online. Along with antivirus services many of internet security software provide with anti-phishing feature to block harmful websites and unwanted web pages. Moreover to spam unwanted e-mails they provide with anti-spam feature.Nowadays parental control feature is added to make child's use limited or restricted. Along with using best antivirus security software you should use strong password and you must delete your browsing history and cookies after surfing the web. Nowadays the antivirus security software provide with full, custom and boot time scans, where full includes full computer and only few parts are used in custom scan and the scanning which takes place at the time of starting of the computer is known as boot time scan. In today's world the antivirus software has become so advanced that they also provide with options like registry cleaners. They also use DNA scan technology to scan the pc based on cloud services. There is also a feature to restore nifty registry. Along with all of these services the antivirus security software provides with customize option in which the user can have the settings according to their needs. USB security proves to be an additional feature.

Things to ponder

The best antivirus security software is of no use if it works well, but hard to use. Hence it must be easy to use and must have good interface. Moreover it should not slow down the processor speed and must have a smooth scanning speed. Moreover the antivirus security software should be easy to install and work on it. The antivirus protection software must be compatible with the system of the machine and the internet browsers.
