Article published on February 24th 2012 | Software

Cloud computing is one of the revolutionary ideas to hit the IT sphere which have increased the power of internet many folds. It refers to a system that enables delivery of computing processes as service- not as a product. This has enabled the users to share resources, information and software programs over network such as internet. This is offered as a metered service to the users. The great thing about the cloud computing is that the users need not even know the details of computing infrastructure they are using such as the location of these services.

One can use cloud connect to access the applications on their desktop or mobile devices over a web browser. The business logic or the software programs, as well as the userâ€™s data are stored in the remote servers. The service providers will ensure that the users get the same performance of the apps as if they are installed on their own devices locally. Cloud connect is based on the concept of Converged Infrastructure. This allows the end users to work in the environment to run their applications easily maintained and run with higher performance without investing in infrastructure such as servers, networking and storage. This will also enable them to easily manage the fluctuating need of resources easily.

BlueStacks, a Silicon Valley startup, is offering the advantages of cloud computing with the newly released alpha version, â€œBlueStacks Cloud Connectâ€•. This is offers the advantages of cloud computing to run Android apps to the BlueStacks App Player to be installed on your PC. You will be able to access Google cloud which offers unique advantages over other platforms. It makes you to seamlessly integrate with many of the Googleâ€™s services. Google cloud offers more storage than the industry average to the extent of 25 GB for email storage. The records show that the up-time with this service is more than 99.9% of the time. You are assured of the highest security compliance standards regarding your data. The tight integration allows you to connect Google Apps to the existing infrastructure. BlueStacks Cloud Connect makes it possible to enjoy the great economy and benefits of offered by Google cloud.
