Article published on November 28th 2011 | Software

The liferay document is a free enterprise portal and an open source that is used to enable corporate intranet and extranet. Liferay is also called as content management framework or application framework. It has all the features a website can offer to its users and clients. Liferay is made of many functional units, known as portlels and is written in Java. It offers much extensive support for plug- ins and extensions for many computer programming languages.

Liferay is a computer coding interface for Java programmers, liferay runs on any Java runtime environment powered by computer system and coupled with an application server. The primary feature of Liferay Development Company is that, the administrator can install the liferay website without having any sound and technical knowledge.

In addition to this, there are more features of liferay document-

- Flexible Enterprise Integration Framework:Â Its central presentation layer that permits users, administrators and developers to incorporate various services from backend applications.

- Liferay Secure Single Sign On: Â By logging in through secure single sign on, users can access the applications and it can also incorporate all different systems for the end-users.

- Custom Fields:Â The executer can add, edit and customize attributes of the users directly from the portlets of Liferay. They can use liferay without accessing or modifying the company database.

- Simplified User Interface Development:Â Liferay uses a singular presentation layer for every business. It offers simplified external and internal websites for different users.

- Liferay Communities:Â The end users of liferay are grouped into several communities, so that they can enjoy flexibility administration effortlessly

- Rules Engine Integration:Â Liferay allows 'Contextual Personalization' based on the location of the end-users and their activities.

- Liferay Extensive Support:Â Liferay provides support for different platforms, such as documents, web content, blogs, image files, forum, calendar, bookmarks, wiki pages etc

- Liferay Single-Click Configuration:Â Liferay has single click configuration, so that everyone within an organization can enjoy fast user interface

- Liferay Workflow Framework:Â The liferay user can save good amount of development hazards by using liferay tools. Liferay offers workflow for better user experience. It integrates workflow engines within the portal. It also allows the users to make their own workflow according to the operational needs

- User Personalization:Â With the permission of administrator, the user can personalize his website pages. He can add and remove content of his website. The user can keep his website public or make it private as well

These were the features of liferay management system that helps in flexile administration.
