Android Apps on Mac by Maria Gini

Article published on December 30th 2011 | Software

It is a way of life! If you do not have it, perhaps owning a Mac could just stop short of a great buy. If you do not have an Android Apps on Mac, then you are basically driving a Mercedes without all its accessories. Do not feel at all singled out as you did not go the iPhone way. From large file transfer applications (You Send It) to High Definition Games like Angry Birds or Flight Simulator an Android on Mac is a must.

Use ASTRO, an Android on Mac app which is a very useful one for keeping a backup of all your apps. You can even manage files, assess the SD card on the fly, view text and images, open email attachments and zip files. Remote for iTunes app is a bit costly app for your android device and if you love to control your computer using mobile phone then it is really a worthy application.

The Wi Fi explorer Pro is an awesome app which allows you to surf, organize files and manage everything over available Wi-Fi networks even when you do not have your micro USM cord with you. In The Double Twist app allows you to air sync all your music, photo and video files over a WI FI network.

Another great app is the Dolphin HD browser. The browsers multi function features allows the user to navigate speedily with tabbed browsing and recovery shore up. Searching your address book has been made extremely easy with the launch of Gesture Search a very thoughtful and creative app which allows the user to simply write out a specific name and the app will do the rest.

Gesture search is a wonderful app designed as you cannot use your voice in order to search your phone. Gesture search helps you to launch an app or find a contact rapidly. You just have to write the name of the search object and search results will automatically update while youâ€™re writing it out. Some other Android on mac apps are Seek Droid, Remote Droid, Chrome to phone, Sync mate, Wi-Fi Explorer Pro and Androidify.

As more and more Android Apps on Mac surface, users will be able to simplify the way they use their desktop and laptop. The Android technology enhances not only the unique experience of internet mobility on the go but basically makes the user more organized and even the not-so-computer savvy beginner a pro at computing.
