ASP.NET Web Application Development – the Open Source Way [by James Andy](#)

Article published on June 14th 2012 | [Software](#)

Dot Net experts have always relished the open source advantage that Microsoft has provided by making the source code of ASP.NET MVC available under an open source license. There's some more good news in store. A product developer for Microsoft has recently announced that the source codes for ASP.NET Web API and ASP.NET Web Pages (Razor) will be released under an open source Apache 2.0 license. Many a .NET development company will welcome this move which also includes making the code repositories of ASP.NET MVC, ASP.NET Web API, and ASP.NET Web Pages (Razor) on CodePlex.

This should provide a major boost to ASP.NET web application development as an open source model will allow the ASP.NET developer community to collaborate and discuss code checkins, bug-fixes, and new feature development. The ASP.NET MVC will also include jQuery, jQuery UI, jQuery Mobile, jQuery Validation, Modernizr.js, NuGet, Knockout.js, and JSON.NET. What comes as a big help for companies looking to hire .NET developers is that these three projects will be fully supported by Microsoft and will still be available as standalone products or as a part of Visual Studio.

Advantages:

You can undertake the important processes of browsing, syncing, and building the source tree for ASP.NET MVC, Web API, and Razor on the CodePlex website

You can access the tree on the site that consists of both, runtime sources as well as tests

Building and testing is easily available to everyone

You can submit your own code fixes or code contributions which will be rigorously reviewed by the ASP.NET MVC Team and if found appropriate, will be integrated into the source

This should cause an exponential increase in the demand from enterprises looking to hire ASP.NET developers for conceiving cutting-edge web apps that leverage the benefits of this new technological advancement.

If you are on the lookout for a credible .NET development company that can translate your .NET development aspirations into reality, look no further than GoodCore. With a dedicated and committed team of experts to choose from, you can hire ASP.NET developers from us who have honed their skills in every aspect of .NET development and are primed to lend their expertise to the development of state-of-the-art web applications for you.
