Carries a Great Virtual Directory Service Has by John Ozoa

Article published on January 12th 2012 | Software

Many organizations deploy numerous virtual directory services within their environments that cause user identity facts becoming disseminated allover the various directory repositories. This developed difficult when one attempts to deploy enterprise applications towards users which exist in these directories. There are lots of providers of virtual directory services that allow you to possess a consolidated view of the Information from your separate directories you have.

A good virtual directory service can provide a remedy to this as well as the key benefit to applying this service is the fact multiple directories are consolidated in realtime without having to duplicate the items inside the LDAP. Such service can join and merge Data that arises from the other LDAP directories and SQL databases. To calling application, its interface is really a single LDAP directory but the simple truth is that Data is joined and consolidated in real-time from numerous disparate Data stores.

In choosing your individual supplier for ones virtual directory server, it is advised make use of 1 that's certified each on windows server 2003 and 2008. This can necessary virtual proxy and directory along with LDAP firewall requirements for organizations and organizations.

With the superb service, you should be able to gain many advantages for example buying a merged view of varied Data shops in realtime which includes LDAP databases and directories. This eliminates the necessity of having to extend the AD Schema for applications. The info and custom third party schema is stored on the virtual layer.

This allows group membership to span various forests or domains with out the requirement for forest trusts. Actually, groups can have dynamic membership that automatically adjustments based on the attribute with the user like location. It also is sold with inbuilt compliance and auditing capabilities that may track then store the activities of LDAP for the SQL Server Database. It features full support for load balancers and failover as well. This definitely does not call for external store for Information.

By utilizing the a good virtual directory service, you can benefit as well in the LDAP proxy that is included with it which offers extreme security and protection.
