Cash Me Out! - Family Law Software by Ivon Lerdorf

Article published on February 14th 2012 | Software

Youâ€™re working cases causing you to pull your hair out. You win a good temporary alimony figure for one client, but it isnâ€™t regularly paid. Another client has a good case for an award of long-term alimony, but the breadwinner is on a short-term employment contract. And then thereâ€™s the client who suddenly says remarriage is already in the cards.

These scenarios and more are why we invented Easy Softâ€™s alimony buyout software. When youâ€™r unsure whether a stream of alimony payments is going to benefit your client and there are assets against which to take an offset, why not use the Easy Soft Divorce Settlement Software, including its alimony buyout calculator to figure out the best divorce financial settlement for your client?

While you may end up using an accountant or CPA to arrive at the final figures before signing a deal, at the least, the Easy Soft Divorce Financial Settlement Software will give you figures you can use for estimates, negotiations, and agreements in principle â€“ even for an alimony buyout computation.

Using the Divorce Software, you can enter up to five asset and liability configurations side-by-side and make comparisons. You can also change variables for the amount, duration, and discount rate used in performing the alimony buyout computation. During divorce settlement negotiations, use the alimony buyout computations as potential asset values and you can imagine how the payor can compensate your client for the value of the alimony claim.

And to make you feel a little better from all the stress your clients put you through, Easy Soft has partnered with various bar associations to offer member discounts on our divorce settlement software. We also offer free trial downloads and a 30-day money back guarantee.

While we canâ€™t hand you a script to use with your client, at least here at Easy Soft we can make those alimony buyout computations one big step closer to cashing out.
