Change Your Forgotten Windows Password Easily by Ander Winger

Article published on May 2nd 2012 | Software

Forgot Windows logon password or my Windows password is unavailable suddenly. It possibly happens in our life frequently. As a layman of computer, you may ask for help from computer exporter or reinstall your computer with a Windows setup CD. However, itâ€™s expensive to change your Windows password with the help of exporter and youâ€™ll lost most of your data if you reinstall your computer. Factually, there are easier and safer ways to change your forgotten Windows password.

As a special diagnostic operating mode of Windows, safe mode which starts Windows with a limited set of files and drivers helps you to diagnose and troubleshoot various computer problems. Once Windows is in Safe Mode, you can actually perform whatever problem solving steps that might need to be done. anyou can change your forgotten Windows password in safe mode. The detailed steps are below:

If your Windows version is Windows XP:

Step1: Press F8 to enter the Advanced Boot Options when your computer is booting.

Step2: Select Safe Mode and access your computer with the Administrator account

Step3: Click â€œStartâ€• to selectâ€• Run boxâ€•, and then input control userpasswords2, click "OK".

Step4: On the coming up Users screen, click user name that you want to reset the password for, and then click â€œReset Password â€œto reset.

If your Windows version is Windws 7:

Step1. Repeatedly press F8 key as the computer is booting. It will list the "Windows Advanced Options Menu".

Step2. Select Safe Mode with Command Prompt and enter your computer with administrator account and password.

Step3. Enter net user on the command prompt, and click â€œEnterâ€•. It will list all the user names of your Windows accounts. Here I take â€œJackâ€• as a user account for example

Step4. Enter net userâ€•jane 123â€• on command prompt and click â€œEnterâ€•. This command line mea you want to reset the lost â€œJackâ€• account password to â€œ123â€•. When it takes effect, youâ€™ll be the Jack account with the new password of â€œ123â€•.

Step5. Now all the operations finished and you can restart your computer.

Of course, In case of that you canâ€™t access safe mode for some reasons, you can also change your Windows logon password with Windows password recovery software. If itâ€™s necessary for you, please refer to: How to recover your forgotten/lost Windows password?
