Article published on June 15th 2012 | Software

We know that the concept of picture memory plays a much better role in the field of child memory retention of the study material and the major companies like Microsoft, Google and other are taking advantage of this and flooding themselves into the education business pool. Hence due to this the mass media applications became a necessary condition for all the operating systems.

We are using the concept of point to multi point communication from 1997 and this concept is still in advancement. Firstly it was launched as local multipoint distribution service in 1997.But after that it was introduced as multipoint to multipoint E-LAN. In video conferencing point to point and point to multi point services are used.

In the year 2010 it is seen that Microsoft is dabbling with capability of linking two peoples. By using window multipoint server you can connect more than 20 workstations by using single computer. This unique feature is used to deliver an absolute economical working platform to classrooms, training centres etc. Even libraries makes use of Windows multipoint server as a unique development and bring about the decrease in infrastructure cost with the latest content of delivery technologies.

You can also install window multi point server as virtual machine and help in bringing advancement in the virtualisation field. It can be used in classroom as well as in remote classrooms where the window multipoint server allow the teacher  to monitor all the stations and can block any station as well as forcing the attention of all the students toward the teacher. This feature related to education segment allow multiple users to connect to a single host which led to huge change in the infrastructure cost and to allow  to share the resource computing and also allow the classic management of strategies of instruction.

This technology brings furious advantages and fixes your need to fewer, fully configured computer systems and reduces the support requirement for workstations. Here we have a well-known example in the form of Microsoft office365. Companies such as Google are focusing on education with their whole team as a source for developing their business. Here Microsoft is also at top to get the full benefit out of education as a business. Google have such type of application features after watching them Microsoft also got worried.

The window multipoint server is actually a means to connect the dumb connections by using a monitor, keyboard and a mouse. Microsoft uses the volume licencing policies and licencing policies for Office Suite which become a source of bounty collection for Microsoft.
