Article published on January 20th 2012 | Software

Google Cloud Print is a latest technology connecting web and your printers. By using Google Cloud Print, you can get connected to both your office and home printers and get a choice to choose to print from anyone of them. It works on tablet, phone, Chromebook, PC and Android too or any web-connected device you choose to print from. It is difficult to print at times, when there is only one printer connected with the working network. With this latest print software, the time can be consumed for a print and it can be proved effortless. Here the files to be print are securely sent through the web or popularly called â€œcloudâ€•. This document or cloud is then can be printed anytime, anywhere and without any printer driver setup. Google has been gaining popularity from last few years. It is a recommended and suggested solution for any application on any device to print through any printer. The cloud virtually helps in connecting device with information access, the task of maintaining and developing subsystems of print for every combination of operating system and hardware- from notebooks to desktops to mobile devices. This makes it feasible to be downloaded on any cost to make printing simpler from anywhere and at anytime.

Running Google Cloud Print on Android is not yet popular as it does not relatively support each other. On the other hand, there are such applications available in the market that enables this feature. It is not a free application and might required to pay around 12 US Dollars. It is an alternative to Printer Share. For Google Cloud print run on Android, you will require its Printer Connector or Google Cloud Ready Printer to be installed. This gets connected directly to the internet and you would not have to run your PC for the setup. It can also connect the classic printers which are connected on your PC through the internet connection. Therefore, with the inventions of latest technologies and demand today you can connect the printers to with your android and as well run on PC together.
