Convert and burn Protected M4V to DVD by Ellietree

Article published on June 20th 2012 | Software

How to play m4v files on computer?M4V is a container, If you have bought them via iTunes, you can open it with any another program (open-source/freeware). Here are some tips:

1All you need to play m4v video is quicktime media player or itunes from apple.com, they are bogth free, you may have to change the extension to .mp4 ..most .m4v files are encoded using h.264 or mpeg4, so you need quicktime or itunes (you can get the latest version from apple.com); note this file is not meant to be played in windows media player or real player

2. If you don't want to use apple player, You can give VLC Media Player a try to play m4v format. It's a great open source video player, and it plays almost anything.

Burn iTunes M4V to DVD

Many person download m4v movie or a television series from iTunes and want to burn m4v files to dvd without losing quality to play them on a stantdard dvd player, and you may noticed that such m4v video file is Apple's DRM format! These files can only be played on apple device, Unless you turn to a reliable program that allows the convert m4v to dvd format(vob), you can not burn them to DVD for playing dvd player direclty

M4V to DVD burner software

For common m4v video files, the best software is nero, it works great for dvd burning, the burning speed depends on the speed of your computer, your architecture (system, like Windows vista or 7), the RAM, the burn speed capability of your burner, the burn speed of the blanks, AND most importantly, whatever else you're doing on your computer while it's burning the disc.

However, if your m4v files bought from iTunes have drm license, you may need a protected m4v to dvd converter software to do this job, this tool is a professional n4v to DVD burner software which lets you easily bypass m4v drm and burn drm protected m4v video to DVD with just a few clicks. With this professional M4V to DVD Converter, you can combine your M4V Video files into video slideshows with beautiful transition effects and a customizable menu, and edit your video files by video cropping, video length trimming and setting different video effects.

Glossary:

M4V is a MPEG-4 file extension, a standard file format used for movie downloaded from the iTunes store, includes movie, tv shows, video, etc. It is similar to an MP4 file, but may be copy-protected by Apple's FairPlay DRM copyright protection.

DVD: A standard VCD records video data in MPEG-1 format. On the other hand, a standard DVD records video data in MPEG-2 format. A DVD player or a computer equipped with a DVD drive is required to play DVDs. Almost all DVD players also play VCDs.
