

Article published on June 26th 2012 | [Software](#)

The combination of processes, people and technology which focuses on the management of various connectivity options suitable for enterprise-wide use such as mobility software and various mobile devices is termed as Enterprise Mobility. Solutions designed to provide Enterprise-wide mobility irrespective of the location or situation of users are broadly classified as Enterprise Mobility Solutions. Through our Custom Software Development expertise, we at eXtendCode transform the organization's Mobility Centre into a centralized location featuring hardware and software components, people as well as support capabilities. The goal of Enterprise Mobility Solutions is to ensure seamless communication of the organization with its contractors, partners, vendors and employees.

Key Benefits of Enterprise Mobility Solutions developed by eXtendCode's offshore software development centre in India for its clients and partners in the Oil & Gas, Hospitality and Retail segments include:

- Improved employee productivity
- Increased accessibility
- Improved customer support and satisfaction
- Streamlined communications
- Reduced operational costs
- Better Information Security
- Increased sales revenues
- Competitive differentiation of brand
- Reduced sales cycles
- Decrease in overall personnel costs
- Improved Customer perception of the Brand

The platforms commonly used for deploying Enterprise Mobility Solutions are Blackberry, Android, Windows, iPhone/iOS and Symbian. We have currently developed Enterprise Mobility Solutions based on Android, iPhone/iOS and Symbian platforms for our clients on a case by case basis. Current application areas for Enterprise Mobility Solutions include:

- Email
- Calendar and Contacts
- Instant Messaging (IM)
- Customer Relationship Management

• Enterprise Telephony

• ERP (Enterprise Resource Planning)

• Sales Force Automation (SFA)

• Business Intelligence (dashboards)

• Document Management and

• Human Resources (HR)

Despite of the numerous benefits provided by Enterprise Mobility Solutions, organizations are also concerned about certain aspects such as security and the cost of implementing such solutions. Apart from these factors, implementation of such solutions is also adversely affected by the lack of awareness regarding the capability of such mobility solutions to further current operations of an organization. However, we at eXtendCode not only help you identify and implement the Enterprise Mobility Solutions suitable for your enterprise, but also go beyond implementation and aid you to resolve any issues arising in the post-implementation phase.

Key Features of Enterprise Mobility Solution provided by eXtendCode™'s Offshore Development Centre in India are:

Security

Keeping in mind the sensitive nature of corporate data, the Enterprise Mobility Solutions deployed by eXtendCode are planned, implemented as well as maintained in the form of secure solutions accessible only by authorized personnel such as clients, partners, employees and vendors.

Self Service

Our mobility solutions ensure availability of necessary information to authorized users through a self-service mechanism. The inclusion of such self-service features into mobility solutions eliminate human intervention and reduce the resource strain faced by organizations.

Broad Access

Our solutions ensure secure access to critical business data irrespective of location or mobility device (desktops, laptops, tablet PCs or smart phones) available to the user. We also take measures to future-proof all our mobility solutions and ensure data accessibility through any new mobility devices, which might emerge in the recent future.

Resource Pooling

eXtendCode™'s Enterprise Mobility Solutions facilitate pooling of shared resources for use by various stakeholders of the company including vendors, partners and employees. Moreover, eXtendCode ensures that accessibility to such pooled resources is location-independent and provides similar user experience regardless of information source or user location.

Metered Services

eXtendCode™'s Offshore Software Development Centre in India also provides Enterprise Mobility Solutions featuring a "pay per use" model, which allows the organisation to charge its users for the data or voice services provided through use of the solution. In such a model, resource usage including voice time and data usage are automatically monitored, reported as well as controlled by the mobility platform implemented by the organization.
