Article published on May 30th 2012 | Software

Does success bring considerable risk and threats? Though, initial perception of success is quite different from the raised concern, for the majority success translates stardom, when any worldly things acquire that status it becomes the most sought-after element in its categories both by lovers and haters. Go through this McAfee review article to know how the celeb status of Mac has given invitation to antagonists. Reports show that Mac that remained to be the stronghold in operating system for long is no safer abode.

The recent Flashback Trojan attack on Mac computers that was revealed by the Kaspersky Labs is a live example as how the popularity can be a curse. The gradual increase in Mac usage has provoked the Internet attackers to target the new market which is truly lavish. Unlike the click fraud that remained a way of breaching computer data, this time attackers manipulated their modus-operandi. This new variant was able to install itself on usersâ€™ machine without asking him/her to click on any particular links. Actually, it exploits the loophole in the Java software. Sometimes, it was asking users to install an update and type in their password, thereby taking hold of infected system. The typical strike affected about almost half of the Mac users in the US alone.

Underscoring the attackersâ€™ interest towards Mac, McAfee, a noted security player now a subsidiary of Intel has come up with a reliable solution in the form of McAfee All Access that was able to bag the PC Mag Editorsâ€™ Choice Award. Though, this is not a standalone protection for Mac computers, can be regarded as a pivotal step. With one single license users can safeguard their Windows PC, Mac, tablet and smartphone. With an extra payment of $50 (base price $99.99) the protection can be extended up to 5 users. Actually, the program is an amalgamation of different McAfee suites including McAfee Total Protection 2012, McAfee AntiVirus Plus 2012, McAfee Family Protection for Android, and McAfee Mobile Security. Purchasing individual licenses would cost nearly $300.00; hence, the product is a wonderful bargain. To install McAfee software on your machine, you must refer to the system requirement as recommended by the vendor, and remove any incompatible product in advance.

Incomplete installation, activation or update failure, which generally results due to software conflicts or compatibility problems, will pull back the software to work as per developerâ€™s warranty. Moreover, if the software is not properly configured or is not in sync with the Windows built in Firewall or other security features, it can give birth to accessibility problems with the Internet, email, network resources like printers, scanners, etc., and more. Whatever the issue may be, you can count on the McAfee Support which is available over the Internet or via phone. Experts can remotely investigate into the ailing machine, and can diagnose the Windows integrated elements like Action Center/Security Center, Performance Monitor, Device Manager, etc. to unravel the hidden causes, and can provide effective resolution. Experts can uninstall McAfee, and then restore it back as per the developerâ€™s specifications to protect your Macintosh computers, Windows, and other network components from growing Internet threats. Evaluating the Internet usage and the nature of web-based applications in use experts can also update and configure browser and email client. Hence, you can stay all-round protected and productive in an error-free state.
